

VACSOL Treatment Markers

When treatments are made to general construction and joinery timbers using our VACSOL (low pressure treatment process) preservative products, the treatment leaves the timbers virtually unchanged in their appearance.

Some treatment companies wish to add a colour to the treatment to help confirm the timbers have been preservative treated.

Lonza offers a range of short term (dye based) and medium term (pigment based) colour options to facilitate this requirement. They provide an initial colour strike purely to indicate a preservative treatment has been added.

Short Term E.g. Domestic Markets:

RED 3880

YELLOW 1626

Medium Term E.g. Export Markets:

YELLOW 3866

RED 3868

BLUE 3864
